The information in Hypertension in Pregnancy should not be viewed as a body of rigid rules. The guidelines are general and intended to be adapted to many different situations, taking into account the needs and resources particular to the locality, the institution, or the type of practice.

Hypertension in Pregnancy: Executive Summary : Obstetrics ...

ACOG has released guidance on the management of sudden onset severe hypertension, including in the setting of preeclampsia. This can be a life-threatening event during pregnancy and requires special vigilance in the postpartum period, particularly following hospital discharge.

ACOG Guidance: Emergency Treatment for Severe Hypertension ...

The ACOG guidelines are more conservative, citing concerns about the side-effects of antihypertensive therapy in pregnancy and the relative rarity of complications at blood pressures of 150/100 mmHg, and would recommend treatment only for blood pressure over 160/110 mmHg. 14 The WHO guideline specified that the evidence is not yet sufficient to determine which strategy is preferable, but ongoing study will clarify this issue in the near future. 20 In all cases, care should be taken to avoid reducing the blood pressure below the lower limits (110/80 mmHg) which would lead to a risk of placental underperfusion. 15

Current best practice in the management of hypertensive ...

Because there is no clear evidence to determine the best threshold, physicians should select either 135 mg per dL (7.5 mmol per L) or 140 mg per dL as a single consistent cutoff for their practice. Factors such as community prevalence of gestational diabetes should be considered in the decision.
