AVR Timer Calculator. Timers are the common feature of any microcontroller. A timer is also known as register. Timers commonly have a resolution of 8 (or) 16 bits. So a 8 bit timer is 8 bits wide so capable of holding value within 0-255. An AVR (Advanced Virtual Risc) microcontroller has effective and multifunctional clocks.

The calculator below may be used to approximate the Evaporation Rate at the surface of a concrete placement. Hot Weather Recommendations may be found below the calculator. This calculator relies on accurate data provided by the user and does not factor in other variables that can affect the speed at which a particular concrete mix will cure.
