In the next step you will write what you want the program to do in pseudocode. Pseudocode (derived from pseudo and code) is a description of a computer programming algorithm that uses the structural conventions of programming languages, but omits detailed subroutines or language-specific syntax.

### **Introduction to Computer Programming - Pseudocode**

The following pseudocode presents an algorithm that reads all the names from a collection, NAMES, and copies them into a LISTn array,, but eliminates any duplicates. That means each name is checked against the names that are already in the array. The collection and the array are passed as parameters to the method.
