### Application Documentation Template

context\_processors is a list of dotted Python paths to callables that are used to populate the context when a template is rendered with a request. These callables take a request object as their argument and return a dict of items to be merged into the context.. It defaults to an empty list. See RequestContext for more information.. debug is a boolean that turns on/off template debug mode.

Referencing Lambda Version & Alias resources. When you use AutoPublishAlias property, SAM will generate a Lambda Version and Alias resource for you. If you want to refer to these properties in an intrinsic function such as Ref or Fn::GetAtt, you can append .Version or .Alias suffix to the function's Logical ID. SAM will convert it to the correct Logical ID of the auto-generated Version or ...

`_.intersectionBy([arrays], [iteratee=_.identity])` source npm package. This method is like `_.intersection` except that it accepts `iteratee` which is invoked for each element of each arrays to generate the criterion by which they're compared. The order and references of result values are determined by the first array.

### Lodash Documentation

will work fine, too. What will not work is to bind one route to more than one function. What you will see in the browser is what is returned, thus the value given by the return statement. In this example, we need to convert result in to a string by `str()`, as Bottle expects a string or a list of strings from the return statement. But here, the result of the database query is a list of tuples ...
