All About Energy Balance | Precision Nutrition

Physiology. Cholesterol is essential for all animal life, with each cell capable of synthesizing it by way of a complex 37-step process. This begins with the mevalonate or HMG-CoA reductase pathway, the target of statin drugs, which encompasses the first 18 steps. This is followed by 19 additional steps to convert the resulting lanosterol into cholesterol.

Cholesterol - Wikipedia

UT Dallas CourseBook is an advanced tool for obtaining information about classes at The University of Texas at Dallas (UTD). Lookup course and catalog information, Class Syllabi (Syllabus), Course Evaluations, Instructor Evaluations, and submit syllabus files from a single central location.

Cardiac tamponade, also known as pericardial tamponade, is when fluid in the pericardium (the sac around the heart) builds up, resulting in compression of the heart. Onset may be rapid or gradual. Symptoms typically include those of cardiogenic shock including shortness of breath, weakness, lightheadedness, and cough. Other symptoms may relate to the underlying cause.

Cardiac tamponade - Wikipedia

Diabetes is a chronic disorder caused by a deficiency of insulin or the body's resistance to using insulin appropriately. Without insulin, the body cannot process the energy it needs which results in elevated blood sugar, or glucose.
