AN INTRODUCTION TO PROGRAMMING USING C++

By now you might have noticed that every statement in C++ must end with a semicolon. A statement is a form of combining expressions together. For instance "cout<<486" consists of the output stream, which is a built in entity, the << operator, and the number 486. The semicolon provides a way to separate statements.

Introduction to Programming - ed2go

A common programming task is to find the elements of an array that satisfy a particular condition. The WHERE function is an essential tool for doing fast conditional array operations in IDL. Most operations that could be done in a Fortran-like style using FOR loops and IF statements can be done faster and more elegantly in IDL using WHERE.
