The granulopoiesis consists of 5 stages, of which the myeloblast is the first recognizable cell. Next in the differentiation sequence is the monoblast and the promyelocyte, which can develop into one of the three different precursor cells: neutrophilic, basophilic or eosinophilic myelocytes.This proliferation needs five divisions before the final stage is obtained.

Application A component of cefsulodin-irgasan-novobi ocin selection medium for Yersinia, a human pathogen that may contaminate animal-source food products. Because of its low antigenicity, irgasan is also a component of many antibacterial consumer products.

Irgasan 97.0-103.0% (active substance, GC) | Sigma-Aldrich

The storage conditions that a Sigma-Aldrich catalog and label recommend for products are deliberately conservative. For many products, long-term storage at low temperatures will increase the time during which they are expected to remain in specification and therefore are labeled accordingly.

N-Nitrosodiethylamine ISOPAC® | Sigma-Aldrich
