Taxonomy: Taxonomy is the laws and principles covering the classification of organisms. Carolus Linnaeus, the "father" of taxonomy, came up with a binomial naming system using the genus and species names. This binomial system is referred to as the "scientific name".

Classification & Food Webs - Marine Science

What is an estuary? An estuary is where the ocean meets a river in a semi-enclosed area. This causes a mixing of fresh and salt water. These areas are home to an immense amount of biological productivity and diversity.

Types of Estuaries - Marine Science

Our living assortments offer an economical way to receive a large variety of animals at a reduce cost. Due to the ever increasing freight costs we have redesigned our assortments to reduce weight and shipping costs, and still maintain diversity.

The largest organisms now found on Earth can be determined according to various aspects of an organism's size, such as: mass, volume, area, length, height, or even genome size. Some organisms group together to form a superorganism (such as ants or bees), but such are not classed as single large organisms. The Great Barrier Reef is the world's largest structure composed of living entities ...

The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14–16 billion neurons, and the estimated number of neurons in ...
