The power wire from your amp wiring kit (usually 16-20 feet in length) needs to run from the battery, through your car's firewall, through the car's body to the amp. Find an unused grommet in the firewall or one that already has wires or cables passing through it and that has enough room for the power wire to fit through too.

Step-by-step Instructions for Wiring an Amplifier in Your Car

The wiring kit complies with the American Wires Gauge (AWG), which represents the thickness of the wire with the numbers. The higher the number is the smaller the thickness. For example, an 18 gauge is thinner than a 4 gauge wire. This thickness determines the amount of power to be transferred to the amplifier.
