Download Abs Monocytes Manual Guide PDF

Monocytes are produced in the bone marrow and then enter the blood, where they account for about 1 to 10% of the circulating white blood cells (200 to 600 monocytes per microliter of blood). After a few hours in the blood, monocytes migrate to tissues (such as spleen, liver, lungs, and bone marrow tissue), where they mature into macrophages.

Monocyte Disorders - Merck Manuals Consumer Version

The monocytes help to fight infections, work in conjunction with other white blood cells to remove dead or damaged tissue and regulate the immune response, according to Merck Manual. The other white blood cells that work together with monocytes include lymphocytes, neutrophils, basophils and eosinophils.
