Acog Abnormal Pap Guidelines 2013

Cervical cancer screening is used to find abnormal changes in the cells of the cervix that could lead to cancer. Screening includes the Pap test and, for some women, testing for a virus called human papillomavirus (HPV) (see FAQ085 "Cervical Cancer Screening"). What causes abnormal cervical cancer screening test results?

Abnormal Cervical Cancer Screening Test Results - ACOG

"Cervical Cancer Screening and Prevention," issued by ACOG in October 2016, provides a review of the best available evidence for cervical cancer screening. The guideline covers cervical cytology screening techniques (Pap test or Pap smear) and test reporting, and human papillomavirus (HPV) vaccination and testing.

Update on ASCCP consensus guidelines for abnormal cervical screening tests and cervical histology.

ThePapApp

Low-grade squamous intraepithelial lesions (LSIL) on a Pap test are cells that appear slightly abnormal. Cervical cancer screening is recommended starting at age 21 years . Women who have ASC or LSIL on a Pap test require further testing because some women with these findings have a precancerous lesion of the cervix.
