Instructions, Applications, and Catalogs Since Airguide Instrument Company has gone out of business, finding information on the applications of Airguide tachometers has become very difficult. In most Airguide applications the tachometer is teamed with a transmitter. The proper functioning of your tachometer depends on the correct transmitter/gauge combination for your application.

This Airguide desk barometer was made by Fee & Stemwedel. It is not in my 1938 Airguide catalog (see the Airguide catalog webpage) but is older than 1956 since it has the F&S logo. I suspect it's from the 1940s. It has an attractive hardwood case, but the performance is mediocre. The dial is difficult to read, not many numbers on it.

A barometer measures air pressure and can forecast the weather within a 12 to 24 hour period. Air pressure can be measured in inches of mercury, millimeters of mercury, or hectopascals, depending on where you live and the gauge on the instrument. In order to tell whether air pressure is rising or falling, you must calibrate the barometer correctly.
