Trend in case fatality rate (CFR) based on linear model where $CFR = 0.183 + (-0.002 \times \text{quarterly time period})$. Model $R^2 = 0.625$. Linear model projections (dashed line) surrounded by 95% CIs (dotted lines) predict a CFR of 10.3 (95% CI, 8.7-11.9) at the end of the study period compared with the CFR of 8.6 actually observed, for a difference of 1.7, which equates to potentially 359 lives saved.

The Effect of a Golden Hour Policy on the Morbidity and ...

One in 16 surgical patients prescribed opioids becomes a long-term user. Overprescribing opioids after surgery is common, and the lack of multidisciplinary procedure-specific guidelines contributes to the wide variation in opioid prescribing practices. We hypothesized that a single-institution, multidisciplinary expert panel can establish consensus on ideal opioid prescribing for select common ...

Opioid-Prescribing Guidelines for Common Surgical ...

Reliable venous access is a cornerstone of safe and effective care of hospitalized patients. Spurred by technological advances, several venous access devices (VADs) for use during and beyond hospitalization are available to meet this need.

Michigan Appropriateness Guide for Intravenous Catheters ...

The incidence of melanoma in Australia continues to rise, 1 with the lifetime risk now being one in 24 for Australian males and one in 35 for Australian females. 2 Early diagnosis and management before the melanoma has metastasised provides the best opportunity for a favourable outcome. Histological confirmation of a melanoma diagnosis. Even when a confident clinical diagnosis of melanoma is ...
