Chapter 2: The locomotor system Skeleton The skeleton consists of bones and cartilages. A bone is composed of several tissues, predominantly a specialized connective tissue that is, itself, called "bone."

### Chapter 2: The locomotor system - Dartmouth College

In music, duration is an amount of time or how long or short a note, phrase, section, or composition lasts. "Duration is the length of time a pitch, or tone, is sounded." A note may last less than a second, while a symphony may last more than an hour. One of the fundamental features of rhythm, or encompassing rhythm, duration is also central to meter and musical form.

### Duration (music) - Wikipedia

### CHAPTER 4: BODY ALIGNMENT, POSTURE, AND GAIT

The "body without organs" (French: corps sans organes) is a concept used by French philosopher Gilles Deleuze. It usually refers to the deeper reality underlying some well-formed whole constructed from fully functioning parts. At the same time, it may also describe a relationship to one's literal body.

### Body without organs - Wikipedia

Figure 2. Periosteum and Endosteum. The periosteum forms the outer surface of bone, and the endosteum lines the medullary cavity. Flat bones, like those of the cranium, consist of a layer of diploë (spongy bone), lined on either side by a layer of compact bone (I). The two layers of compact bone and the interior spongy bone work together to protect the internal organs.

Chapter 15: The thigh and knee Fascia of thigh The thigh is encased by superficial and deep fascia. The superficial fascia covers the saphenous opening (where it is termed the cribriform fascia) and fuses with the fascia lata inferior to, and parallel with the inguinal ligament, thereby preventing any fluid that might collect deep to the subcutaneous tissue of the abdomen from entering the thigh.

### CHAPTER 15: THE THIGH AND KNEE - Dartmouth College

Hi Laura, Its been 6 months I was reading and applying the things you have said in verbal imitation book. This book is awesome. It was a perfect start for my son's mouth movements.

The pelvic girdle (hip girdle) is formed by a single bone, the hip bone or coxal bone (coxal = “hip”), which serves as the attachment point for each lower limb. Each hip bone, in turn, is firmly joined to the axial skeleton via its attachment to the sacrum of the vertebral column. The right and left hip bones also converge anteriorly to attach to each other.
