In statistical hypothesis testing, the p-value or probability value or significance is, for a given statistical model, the probability that, when the null hypothesis is true, the statistical summary (such as the absolute value of the sample mean difference between two compared groups) would be greater than or equal to the actual observed results. In the case of a composite null hypothesis, the ...

Problem 7. A magical four-sided die is rolled twice. Let S be the sum of the results of the two rolls. We are told that the probability that $S = k$ is proportional to k , for $k = 2, 3, \dots, 8$, and that all possible ways that a given sum k can arise are equally likely. Construct an appropriate probabilistic model and find the probability of getting
