There are some obvious discrepancies between the military data shown above and the ADS-B data shown in the previous figure. For one, the military data shows the turn towards BITOD starting after passing over IGARI. This “flyover” of IGARI is not consistent with how an aircraft following an automated path during the cruise part of the flight would turn between waypoints.

The Disappearance of MH370

The aircraft cannot be moved during this alignment process even to the point that a tug cannot bump the aircraft or the align will fail and have to be restarted. As the full align process takes a full 10 minutes it is wise to get the IRS's aligning early in the preflight process to be sure that you have allowed enough time for a proper alignment.
