2) Fuel float adjustment: Fuel float level is critical to proper operation of any carburetor, the HS40 is no exception. Mikuni correctly adjusts the floats during assembly but they may be accidentally bent out of adjustment during tuning or other handling. If you have doubts, check the float level and re-adjust if needed.

### **Mikuni TM Rack Carb tuning questions. - American ...**

On most Mikuni stuff, setting the float arms to be parallel to the bowl gasket surface when the carb is inverted is a good starting point. If the level is too high, a tilted-towards-the-engine carb position, plus vibration, will make fuel dribble from the idle holes at the lower, engine-side edge of the slide, making the mixture rich and irregular.
