ally appears in practice. The more fundamental concept upon which much of the mathematics

developed here rests, is that of limits. That is, there are important spaces arising in applied mathematics that have well defined notions of limits, but these limiting processes are not compatible with any metric.

The source of all great mathematics is the special case, the concrete example. It is frequent in mathematics that every instance of a concept of seemingly great generality is in essence the same as a small and concrete special case.¹ We begin by describing a rather general framework for the derivation of PDEs
