### **API STD 671 : Special-Purpose Couplings for Petroleum ...**

Only disc couplings and diaphragm couplings can be used in API 671 applications. The application speed & torque are the primary determining factors as to which type of metallic coupling is best suited for the application. Gear and quill shaft type couplings are permitted in the API 671 standard but are not common.

This standard is referenced normatively in API 610. It is applicable to both new and retrofitted pumps and to pumps other than API 610 pumps (e.g. ASME B73.1, ASME B73.2, and API 676 pumps). This standard might also be referenced by other machinery standards such as other pumps, compressors, and agitators. Users are cautioned that this standard is

### **API Standard 682**

This standard covers the minimum requirements for a machinery protection system (MPS) measuring radial shaft vibration, casing vibration, shaft axial position, shaft rotational speed, piston rod drop, phase reference, overspeed, surge detection, and critical machinery temperatures (such as bearing metal and motor windings).
