Basic Life Support Guidelines

Basic life support (BLS) is a level of medical care which is used for victims of life-threatening illnesses or injuries until they can be given full medical care at a hospital. It can be provided by trained medical personnel, including emergency medical technicians, paramedics, and by qualified bystanders.

Basic life support - Wikipedia

2. Summary of changes in basic life support and automated external defibrillation since the 2010 Guidelines. Guidelines 2015 highlights the critical importance of the interactions between the emergency medical dispatcher, the bystander who provides cardiopulmonary resuscitation (CPR) and the timely deployment of an automated external defibrillator (AED).

Adult basic life support and automated external defibrillation

Introduction. This chapter contains guidance on the techniques used during the initial resuscitation of an adult cardiac arrest victim. This includes basic life support (BLS: airway, breathing and circulation support without the use of equipment other than a protective device) and the use of an automated external defibrillator (AED).
