We all hate injections; but I am sure we would hate contracting deadly tropical diseases a little bit more. In this video we take a look at what immunity is, how we obtain it naturally and how we ...

Immunity - AQA Biology

Cell recognition and the immune system: An antigen is a protein that forms antigen-antibody complexes when complementary paired with an antigen. Agglutination is where antibodies called agglutinins link bacterial cells together to form a clump called an agglutinate. Some viruses react to the surface of red blood cells (the haemagglutinins)...

Unit 1 Notes - Chemstuff | Mr Banks's Chemistry Site

Each type of cell has specific molecules on its surface that identify it. These molecules include proteins and enable the immune system to identify: pathogens; cells from other organisms of the same species; abnormal body cells; toxins. Definition of antigen.

Cell recognition and the immune system - AQA

Unit 1 - Biology 1. Vaccines stimulate the white blood cells to produce antibodies that destroy the pathogens. This makes the person immune to future infections by the microorganism. The body can respond by rapidly making the correct antibody, in the same way as if the person had previously had the disease.
