2013 Acm Papers On Zigbee Wireless telecommunications is the transfer of information between two or more points that are not physically connected. Distances can be short, such as a few metres for television remote control, or as far as thousands or even millions of kilometres for deep-space radio communications.

This paper discusses selected security issues of the Zigbee/802.15.4 standard. The first part gives an introduction to the 802.15.4 standard and describes the security of the two lowest layers (MAC, PHY). The second part focuses on ZigBee architecture and its security functions.

The ZigBee Smart Energy Profile (SEP) specification uses elliptic curve cryptography (ECC) for implementing certificate-based key establishment (CBKE) between communicating devices. This paper presents the design, implementation, and evaluation of OpenECC, the first open-source library supporting ECC-based protocols for ZigBee SEP version 1.x.

I've been asked to look at some Zigbee products that our facility folks want to deploy throughout the enterprise. I analyzed Zigbee before and see little cause for concern. In the past I would put the hammer down. Only allowing device in 2.4 that would connect to my WiFi. But it seems the need is becoming more and more from other departments.

For systems where low power and cost are desirable, but security is a priority, the application developer must be extremely cautious in the design of their network. This paper surveys security issues and vulnerabilities in the ZigBee specification and current key management schemes proposed for these networks.
