In this article, you will receive exam-relevant information about antiplatelets, anticoagulants, and fibrinolytic agents to be perfectly prepared for your medical studies. Oral antiplatelet agents , aspirin & ticlopidine , anticoagulants , warfarin & unfractionated heparin . Read more here!

Antiplatelets, Anticoagulants and Fibrinolytic Agents

Antiplatelet drugs are less effective than anticoagulants in this setting because of the limited platelet content of venous thrombi. Fibrinolytic therapy is used in selected patients with venous thromboembolism. For example, patients with massive PE can benefit from systemic or catheter-directed fibrinolytic therapy.

In NSTEMI-ACS, dual antiplatelet therapy with aspirin and a P2Y₁₂ inhibitor remains the cornerstone of treatment, and aspirin is recommended as first-line, indefinite therapy. 6 Several sections of the guidelines that include guidance on how to manage antiplatelet therapies in patients with NSTEMI-ACS were updated to include the newest P2Y₁₂ ...

Acute Coronary Syndrome: Focus on Antiplatelet Therapy

In most hospitals, fibrinolytic therapy is more readily available than percutaneous transluminal coronary angioplasty (PTCA); however, PTCA may be the preferred approach if it is available within an hour and a half. Antiplatelet drugs, such as glycoprotein IIb/IIIa receptor antagonists, are used to improve distal myocardial perfusion.
