So, first things first. Cooling. If you are using the stock CPU cooler, or do not have a cooler that is rated for a TDP (Thermal design power, or in laymans terms, how much maximum heat the CPU is going to be capable of creating, in watts) that is at least 30% greater than the CPUs stock TDP rating, (40% or more above the stock TDP would be a lot better), then you first need to address your ...
