Apache Velocity Documentation
Apache Velocity is a Java-based template engine that provides a template language to reference objects defined in Java code. It aims to ensure clean separation between the presentation tier and business tiers in a Web application (the model–view–controller design pattern).. Velocity is an open source software project hosted by the Apache Software Foundation.

then all would be fine: Velocity would figure out that Vector implement Collection (via List), and therefore will find the iterator() method, and use that to get a 'fresh' Iterator for its use each time it needs to. With just a plain Iterator (the first snippet above...), once velocity has used it in a #foreach(), Velocity has no way of getting a new one to use for the next #foreach() it is ...

A similar HTML report, although a bit smaller because SwingSet2 demo is entirely contained in the default Java package. Unlike the Velocity example, I used the on-the-fly instrumentation mode here: SwingSet2 classes are instrumented as they are loaded by the JVM. I could have generated the report on application exit, but just for demo purposes I let EMMA dump raw data to a coverage session ...
