Java programmers have two popular choices for a Java Development Kit (JDK), also generically known as a Software Development Kit (SDK): # Open JDK (the default, usually installed using Linux package managers) # Oracle's JDK The primary difference being that the Oracle JDK includes some licensed enterprise monitoring tools.

Linux Tutorial: Java on Linux - YoLinux.com

Java is a general-purpose programming language that is class-based, object-oriented, and specifically designed to have as few implementation dependencies as possible. It is intended to let application developers "write once, run anywhere" (WORA), meaning that compiled Java code can run on all platforms that support Java without the need for recompilation. ...

PHP is easy to learn as compared to JAVA because it is easier to learn and use. That is why there are so many PHP developers these days. The developers can use JAVA, PYTHON or.NET, it is completely up to them but from my point of view PHP had significant edge over its competitors as it is open source and stable.
