In calculus, the second derivative, or the second order derivative, of a function f is the derivative of the derivative of f.Roughly speaking, the second derivative measures how the rate of change of a quantity is itself changing; for example, the second derivative of the position of a vehicle with respect to time is the instantaneous acceleration of the vehicle, or the rate at which the ...

Second derivative - Wikipedia

The derivative of a function of a real variable measures the sensitivity to change of the function value (output value) with respect to a change in its argument (input value). Derivatives are a fundamental tool of calculus.For example, the derivative of the position of a moving object with respect to time is the object's velocity: this measures how quickly the position of the object changes ...
